dotData Announces Plans to Open Office in Japan to Meet Growing Demand for Data Science Automation in the Enterprise

Spinoff from NEC sees opportunity in Asia-Pacific; plans to support early clients

Cupertino, CA – October 22, 2018 – dotData, the first and only company focused on delivering end-to-end data science automation and operationalization for the enterprise, today announced that it will establish an office in Tokyo, Japan in January 2019. A spinoff from NEC, dotData was founded, and is led, by Dr. Ryohei Fujimaki, a world-renowned data scientist, and the youngest research fellow ever appointed in NEC's 119-year history.

The new office will provide support to dotData's current Japanese and Asia-Pacific client base and will enable dotData to enhance its responsiveness and market reach in the region.

"We are very excited to establish a formal presence in Tokyo early next year," said Ryohei Fujimaki, dotData's CEO. "We have a strong base of support in Japan and look forward to working with existing and new clients in that region."

The AI-powered dotData Platform completely automates and operationalizes the entire data science process, from data collection through production-ready models. As a result, the entire data science process is accelerated from months to days, enabling companies to rapidly scale their AI/ML initiatives to drive transformative business change.

About dotData
dotData is the first and only company focused on delivering end-to-end data science automation for the enterprise. dotData's fully-automated data science platform speeds time to value by democratizing, operationalizing and accelerating the entire data science process, from raw data ingestion through AI-powered feature engineering to ML models in production. dotData is delivering new levels of speed, scale and value in successful deployments across multiple industries, including several Fortune Global 250 clients.
